

# Become a Recycling Expert

*Marin Sanitary Service*

CONSERVATION – OUR EARTH, OUR MISSION, OUR JOB

## How Does Recycling Reduce Global Warming?

Recycling paper saves trees, and trees capture the gasses that cause global warming

Reducing Garbage prevents the release of gases from the landfill that cause global warming.

Recycling reuses “waste” to make new useful products, which saves energy and resources.

## Are you ready to become a Recycling Expert!?

1.) Take the quiz on the back to find out what items go in each colored cart

2.) Make it easy for your family to recycle

-Remind your family what can be recycled when you see them throwing things in the wrong cart

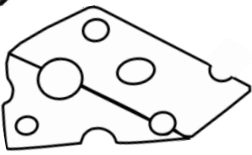

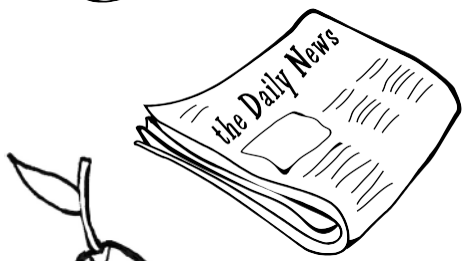

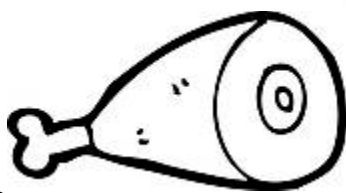

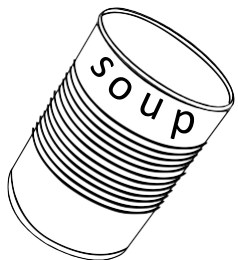

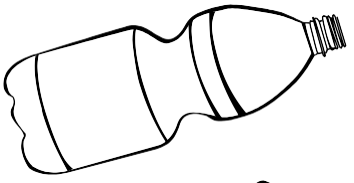

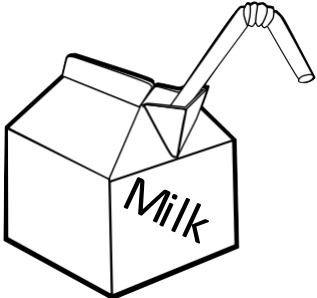

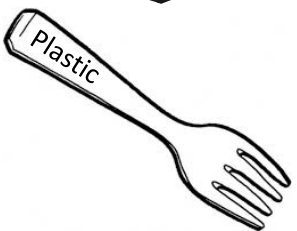

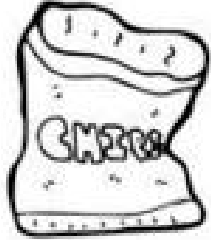

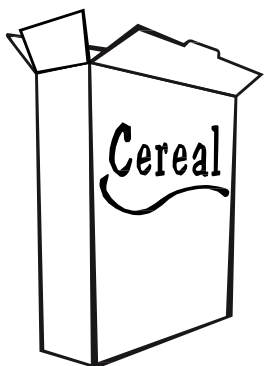

-Make Recycling easy at your house. For example, make sure your parents desks have a paper recycling bin nearby, and the kitchen has a food recycling bin.

-Make signs for each bin to remind everyone what does and doesn't go inside

3.) Celebrate! Look at all the material you kept out of the landfill! That helps the whole world so celebrate with your family!

Now that you know what items can be recycled in your area and how to sort them, see how many of these items you can keep out of the garbage. Draw a line to the correct bin.

**Extra Credit:**

Draw Pictures of all the other things you can put in recycling and composting carts.
